

Hot Degrees 2021: The Year's Major Astrological Events

Here, *handily summarized*, you will find the dates and degrees of all the stations, eclipses and outer planet sign changes in 2021—plus any conjunctions, oppositions or squares between those planets and Mars. The bottom of this page shows the monthly positions of not only the planets, but also the potent, but often overlooked, midpoints of the planets Jupiter through Pluto.

Page 2 shows these important astrological events in the usual arrangement by date. Compared to 2020, this year looks like a cakewalk (well, compared to 2020, virtually every year looks like a cakewalk). However, we have to look out for that Uranus/Saturn square that is going to be around for most of the year, perfecting in mid-January, mid-June and late December. With Saturn traditionally at home in Aquarius, and Uranus feeling unwelcome in Taurus, look out for changing control structures throughout the year, with conflicting parties both absolutely sure that they are right. Jupiter will bring some optimism when it goes into Pisces in mid-May, but it won't last long as it goes back into Aquarius in late July until the end of the year. Still, Jupiter will be moving forward in Pisces just in time for the June 10th Solar Eclipse (with retrograde Mercury joining in on the party), so look for some excellent focus during that period, which should keep things from becoming too amiss.

Page 3 arranges these events by their degree within each sign mode, making it easy to see how they would conjunct, square or oppose your chart points. Also, the column headed "45°/135°" shows the degree and mode where these events would contact your chart by semi- or sesqui-square (which, especially when they involve major transits, can also have noticeable effects). To see how the major transits of 2021 affect you, compare this table with the degrees in the Cardinal, Fixed and Mutable signs in your natal chart (and maybe also your progressed, solar-arc-directed and return charts). Sorting the events by mode and degree shows the year's most emphasized degrees.

On Page 4 and 5 is a 45 degree graphic ephemeris for the entire year. Look for line intersections. Because the graph is in the 45 degree modulus, you can easily see semisquares and sesquiquares. Direct and retrograde stations are easily seen as the peaks (Station Rx) and troughs (Station D) on the curves. You can even draw lines for your natal positions across the graph by using the handy 45-degree equivalency guide on the last page. More info on using a graphic ephemeris can be found at <http://www.astralis.it/45deg.htm> in an article by Mary B. Downing, a great friend of Astrolabe. All calculations were done by the best-selling astrology program Solar Fire 9, available from <https://alabe.com>.
